

Conflict of interest register: Revision of *Clinical practice guidelines for the prevention, early detection and management of colorectal cancer (CRC) 2nd edition (Dec 2005)*

Conflict of interest was assessed and managed according to Cancer Council Australia's *A Code of Practice for Declaring and Dealing with Conflicts of Interest*.¹

All of the Working Party members, including consumer and GP representatives and Cancer Council project staff, were asked to declare in writing any interests relevant to the guidelines development. The Chair was responsible for evaluating all statements. The evaluation of possible conflicts of interest was guided by *A Code of Practice for Declaring and Dealing with Conflicts of Interest*.² All declarations and the evaluation outcome were added to the register of interests for the guidelines.

Members had the option to submit a curriculum vitae (CV) to summarise their experience, skills and publications in the colorectal cancer field. However, it was not compulsory to submit a CV. The Chair could request to view a CV if necessary. The information in the CVs provided is intended to complement or provide additional detail about the individual.

This register was available to the Working Party members throughout the development of the guidelines, allowing members to take any potential conflicts of interest into consideration during discussions, decision making and formulation of recommendations. Members were asked to update their information throughout the guidelines development process if they became aware of any changes to their interests.

When the guidelines enter the updating phase, Working Party members will be responsible to update their conflict of interest statements if a new interest arises. The members would receive a formal reminder to review their statements and ensure it is up-to-date.
